

# LECTURES ON FRONTIERS OF QUANTUM MATTERS

量子物质前沿讲座

清华大学  
Tsinghua University

TITLE |

**Quantum circuit and the hierarchy of many-body entanglement**

SPEAKER |

**Xie Chen 陈谐 (Caltech)**

TIME |

2:30-4:00 August 24, 25 , 2023

VENUE |

Room 104, Science Building  
Tsinghua University

**主办方：清华大学高等研究院**

ABSTRACT

Entanglement in many-body quantum systems is notoriously hard to characterize due to the exponentially many parameters involved to describe the state. On the other hand, we are usually not interested in all the microscopic details of the entanglement pattern but only some of its global features. It turns out, quantum circuits of different levels of complexity provide a useful way to establish a hierarchy among many-body entanglement structures. A circuit of a finite depth generates only short range entanglement which is in the same gapped phase as an unentangled product state. A linear depth circuit on the other hand can lead to chaos beyond thermal equilibrium. In this talk, we discuss how to reach the interesting regime in between that contains nontrivial gapped orders. This is achieved using the Sequential Quantum Circuit — a circuit of linear depth but with each layer acting only on one subregion in the system. We discuss how the Sequential Quantum Circuit can be used to generate nontrivial gapped states with long range correlation or long range entanglement, perform renormalization group transformation in foliated fracton order, and create defect excitations inside the bulk of a higher dimensional topological state.
