Title：Search for effective low energy theories for spin liquid states Prof．NG Tai Kai<br>The Hong Kong University of Science and Technology<br>Time：3：15pm，Tuesday，April 2， 2013<br>（2：45～3：15pm，Tea，Coffee，and Cookie）

## Venue：Conference Hall 322，Science Building，Tsinghua University

## Abstract

I shall describe in this talk the difficulties we face in constructing low energy theories for spin liquid states and shall explain our recent work on a Landau Fermi－type effective low energy theory for $\mathrm{S}=1 / 2$ systems．

Some experimental predictions of our theory and its relation to slave－rotor type theories will be discussed．The limitation of the theory and some plausible directions of extensions of the theory will be discussed，especially in relation to $\mathrm{S}=1$ systems．
